Multimodal Transportation Experts Explore Innovations That Will Shape How We Move

National and regional experts discuss transportation needs and solutions for a growing population and changing climate

LOUISVILLE, Colo – With an unprecedented 80,000 new residents moving to Colorado in the last year, the transportation industry must rapidly evolve to keep up to date with the needs of a developing region. Taking into account state policies, infrastructure, land use management and carbon emissions, Commuting Solutions Third Sustainable Transportation Summit on May 15 at the University of Colorado – Boulder will convene industry experts across the state and country to explore “Destinations and Demand,” and how experts are integrating multi-faceted options into land-use and infrastructure.

“The conversation around transportation is not just about how we move around,” explains Audrey DeBarros, Executive Director of Commuting Solutions. “It’s how we integrate new technologies into existing infrastructure, creating options that are equitable and accessible to all and ensuring a sustainable future for everybody.”

The Third Sustainable Transportation Summit will feature a keynote address from Dr. Daniel Sperling, the founding Director of the Institute of Transportation Studies (ITS–Davis) at the University of California, Davis, as well as panels comprised of regional industry experts to provide insight into these nuanced topics that are impacting our growing Colorado cities. The complete agenda for the Third Sustainable Transportation Summit is as follows:
