STATE HIGHWAY 119

BUS RAPID TRANSIT STUDY

RTD
A NEW ANGLE ON THE DIAGONAL HIGHWAY

SH 119 BRT Corridor Project Update & Bikeway Development

Public Meetings February 2019
Project Partners
Given inadequate funding for Northwest Rail in the near term, RTD initiated the NAMS in April 2013.

Purpose was to develop consensus among RTD, CDOT, and Northwest-area stakeholders on cost-effective mobility improvements.

Stakeholders developed “Final Consensus Statement” to establish priorities for Northwest area.

One of highest priorities was to establish Bus Rapid Transit (BRT) in the SH 119 Corridor from Longmont to Boulder.

RTD Board approved resolution accepting Final Consensus Statement in June 2014.

Next Step: advance NAMS recommendation for SH 119 BRT.
What is Bus Rapid Transit (BRT)

- Premium, branded, high-capacity transit service
- Frequent, fast, efficient, safe, and reliable
- Limited stops to improve speed and reduce travel time
- Dedicated bus lanes, or queue jump lanes and Transit Signal Priority (TSP)
- Comfortable vehicles and enhanced stations
- Pedestrian, bicycle, and rideshare access to stations
Examples of BRT Projects

- sbX in San Bernardino, CA
- HealthLine in Cleveland, OH
- US 36 BRT, Boulder - Denver
- VIVA in Ontario, Canada
- SDX in Las Vegas, NV
SH 119 BRT Project Timeline

**2019 DRCOG TIP Grant Approval for:**
- Business and transit (BAT) lanes for buses in Boulder
- Coffman Street dedicated BRT lanes in Longmont
- Queue jump/bypass lanes for BRT at SH 119 and SH 52

**April: RTD Selects Preferred Alternative**

**Pursue Additional Funding Options**

**Alternatives Analysis, Environmental Clearance, & Preliminary Engineering**

**Public Meetings**

**Construction Begins**

**Final Design**
SH 119 BRT Study Process

1. DESIRED OUTCOME OF THE STUDY
   - Create reliable BRT service
   - Optimize BRT to attract the most riders
   - Address first/last mile connectivity
   - Advance a cost effective BRT option

2. ANALYZE EXISTING AND FUTURE CONDITIONS
   - What BRT route and service level saves travel time?
   - Can BRT serve multi-modal needs?
   - Does the BRT route connect to local transit?

3. DEVELOP ALTERNATIVES
   - Route
   - Service
   - Physical Improvements

4. EVALUATE ALTERNATIVES
   - Travel time savings?
   - Improve Travel Time Reliability?
   - Generate high amount of riders?
   - How many bus service hours?
   - Is the BRT option cost effective?
   - Is there funding available?

5. CHOOSE PREFERRED ALTERNATIVE
   - Complete Preliminary Design
   - Complete Environmental Process
Service / Route Alternatives
Purpose of Alternatives Evaluation

Three bus routes/patterns X three physical configuration options = 9 separate alternatives

BUS ON OUTSIDE SHOULDER OPTION

TRANSIT SIGNAL PRIORITY & BRT BYPASS/QUEUE JUMP OPTION

INSIDE BRT/MANAGED LANE OPTION
Physical Configuration Examples

**Bus-on-Shoulder**

RTD and CDOT coordinating on all highway improvement options.

**BRT Bypass Lanes**

**BRT / Managed Lanes: US 36**
Evaluation Process

**Scoring Criteria**
- BRT travel time savings
- Total person trip throughput
- BRT travel time reliability
- BRT ridership
- BRT boardings per hour
- O&M cost per boarding

**Informational Criteria**
- Travel time comparison
- BRT service hours
- Local transit service hours
- Local transit ridership
- Total transit ridership
- BRT O&M cost
- Funding availability
- Capital cost
- Opportunity for future mobility options, e.g., AV

3 BRT Route / Service
3 Physical Configuration

Alternatives
Analysis

Locally Preferred Alternative with Environmental Clearance
Travel Time Savings of BRT Route Options Compared to BOLT Travel Time

- **Existing/Expanded BOLT/J Service in Mixed Flow Traffic**
  - 66 Minutes Travel Time

- **Bus on Outside Shoulder Option**
  - 40 Minute Travel Time (26 Minutes Saved)

- **Transit Signal Priority & BRT Bypass/Queue Jump Option**
  - 38 Minute Travel Time (28 Minutes Saved)

- **Inside BRT/Managed Lane Option**
  - 37 Minute Travel Time (29 Minutes Saved)
Projected Number of People Traveling Through the Corridor in All Modes: buses, vehicles, express tolls, bicyclists, and carpoolers

Existing/Expanded BOLT/J Service in Mixed Flow Traffic

- **BUS ON OUTSIDE SHOULDER OPTION**
  - 5,740 – 5,760 people traveling through the corridor
  - 2% increase compared to BOLT/J

- **TRANSIT SIGNAL PRIORITY & BRT BYPASS/QUEUE JUMP OPTION**
  - 5,820 – 5,860 people traveling through the corridor
  - 2% increase compared to BOLT/J

- **INSIDE BRT/MANAGED LANE OPTION**
  - 7,620 – 7,640 people traveling through the corridor
  - 33% increase compared to BOLT/J
Improve Transit Travel Time Reliability

1. Poor Reliability
2. Better Reliability
3. Best Reliability

Existing/Expanded BOLT/J Service in Mixed Flow Traffic

Bus on Outside Shoulder Option

Transit Signal Priority & BRT Bypass/Queue Jump Option

Inside BRT/Managed Lane Option
Forecasted BRT Annual Ridership (2040)

1. Existing/Expanded BOLT/J Service in Mixed Flow Traffic: 648,000
2. Bus on Outside Shoulder Option: 675,000
3. Inside BRT/Managed Lane Option: 687,000
4. Transit Signal Priority & BRT Bypass/Queue Jump Option: 702,000
Capital Costs* of BRT Options with 2-Route Pattern

**BUS ON OUTSIDE SHOULDER OPTION**

$143-147M

**TRANSIT SIGNAL PRIORITY & BRT BYPASS/QUEUE JUMP OPTION**

$153-156M

**INSIDE BRT/MANAGED LANE OPTION**

$214-218M

*in 2023 year-of-expenditure dollars

Includes all project elements: roadway improvements, BRT vehicles, stations, park-n-rides, Coffman St. busway in Longmont, BAT lanes in Boulder, and commuter bikeway
Evaluation Key Findings

• **BRT/Managed Lanes provide:**
  • Highest travel time savings
  • Best transit service reliability
  • Higher transit ridership
  • Greatest number of travel options and benefits for all users: vehicles, transit, carpool, express tolls, and bicyclists while reducing congestion
  • Improvements can be phased over time as funding becomes available

• **2-4 route pattern provides:**
  • Excellent service coverage in both cities, similar to BOLT/J
  • More direct, one-seat rides than single route
  • Increase in service hours and O&M cost can be phased over time as warranted and as funding becomes available

Online Questionnaire
1,343 responses
Fall 2018 through Jan. 2019

BOLT/J Onboard Survey Key Findings

Conducted - Thursday, Oct. 25, 2018
- 855 surveys distributed by operators to BOLT/J passengers
- 228 surveys returned - 27% response rate, slightly higher than other RTD onboard surveys

- Most riders use the BOLT/J to commute to/from work.
- BOLT/J riders travel an average of 50 minutes to complete a trip.
- On-time performance, frequency of service, and total travel time are the most important aspects riders consider when choosing to ride the bus.
- 78% of BOLT and J riders indicated that they prefer an upgraded Transit Service (expanded BOLT/J, 1 Route BRT, 2 Route BRT, or 4 Route BRT).
Online Questionnaire Key Findings

Conducted - Fall 2018 to January 31, 2019
• 1,343 people accessed the questionnaire
• Asked the same questions as Onboard Survey

- 79% indicated that they have used RTD Public Transit in the last 12 months
- On-time performance, frequency of service, and total travel time are the most important aspects riders consider when choosing to ride the bus.
- 75% of respondents indicated that they prefer an upgraded Transit Service.
Improved Local Service Connections to the BRT
SH 119 Package of Corridor Improvements

- Improved transit travel time with:
  - Frequent service (15-min. peak / 30-min. off-peak)
  - Limited stop BRT service
  - Transit Signal Priority (TSP)
- BRT/Managed lanes along SH 119 median
- Improved local bus connections in Longmont, Boulder, & Gunbarrel
- 20 enhanced, safe and comfortable stations with BRT branding, real time passenger information
- Off-board fare collection with improved loading and unloading
- 5 Park-n-Ride facilities
- New commuter bike path along SH 119
Project Purpose and Goals

Purpose:
• To develop and evaluate alternatives to provide a safe and efficient shared-use facility along SH 119, that interfaces with the proposed BRT improvements, and enhances bicycle and pedestrian usage in the corridor.

Project Goals:
• Provide continuous and direct shared-use facility
• Improve safety
• Connect to future BRT system
• Connect to existing trail network
• Encourage multi-modal transportation in the SH 119 Corridor
• Develop conceptual design and cost estimate
• Study Background
  • Began Study Summer 2018
    • Information Gathering: Field review, traffic counts, existing infrastructure
    • Existing Conditions Report Submitted Fall of 2019
    • Developed Screening Criteria Framework
    • Developed and screened different alignments
  • Stakeholder and Public Involvement
    • Met with RTD/Parsons Team
    • Met with Local Agencies
    • Brings us to today!
CDOT SH 119 Bicycle and Pedestrian Connectivity Study

Study Limits

• Foothills Pkwy/SH 119
• SH 119/Hover Rd

Segments and Alignments

• South, Middle and North
• West, Center Median and East

Critical Issues

• Connectivity at termini
• Intersection Crossings
• Integration with BRT
Alternatives Evaluation Matrix

Evaluation of West, Center and East Alignments for SH 119 Shared-Use Path
